

SOFT STARTERS

ADXN SERIES

THE ADXN SERIES SIMPLE, COMPACT AND FUNCTIONAL

ADXN series soft starters are ideal for applications which demand a **simple, compact and easy to configure solution** for gradually starting and stopping motors. Their **versatility** makes them adaptable to a variety of applications, including pump, fan, conveyor and compressor control, and they are available with **current ratings from 6 to 45 A**.

WIDE RANGE OF POWER SUPPLY

- rated line voltage from 208 to 600 VAC
- available in versions with 24 VAC/DC or 100-240 VAC auxiliary supply voltage

INTEGRATED BYPASS

for disabling the thyristors once the starting ramp has concluded

- **energy savings:** reduced heat generation and power loss
- **the thyristors are protected against unpredictable phenomena on the line while the motor is running** (short circuit, overvoltage, etc.).

COMPACT SIZE

45mm wide housing for the entire range. The ideal solution for enclosures with limited space
2 mechanical sizes:
- size 1: 6, 12 and 18A
- size 2: 25, 30, 38 and 45A

2 INTEGRATED RELAY OUTPUTS

for signalling or controlling external equipment.

ADXNB

cULus CERTIFIED

all versions are cULus certified for the North America and Canada markets.

ADXNF ADXNP

3 STATUS LEDS

for signalling:

- presence of auxiliary power supply
- ramp in progress/Top Of Ramp (TOR)
- alarm.

READY TO USE!

factory set configuration for quick and simple commissioning.

INTEGRATED PROTECTION FUNCTIONS

- soft starter thermal protection with integrated temperature sensor
 - line frequency/voltage out of limits
 - line voltage not present, phase loss, wrong phase sequence
- In addition, for the ADXNP advanced version:
- electronic thermal motor protection, locked rotor, current asymmetry, load too low, starting too long.
- Factory set thresholds, can be modify via NFC.

EASY CONFIGURATION

few easy parameters, configurable with the front panel potentiometers or using smart devices with NFC connectivity.

MOTOR PROTECTION

- soft start with gradual ramp up
- reduced inrush current and starting torque
- reduced vibration and mechanical stress
- increased motor service life!

3 VERSIONS

1

BASIC VERSION: ADXNB

Quick and simple

Ideal solution for those who need a soft starter with basic functions and extremely simple to configure, with the only purpose to control the gradual starting and stopping of a motor.

Just 3 parameters, configurable with the front potentiometers:

- starting voltage
- acceleration ramp
- deceleration ramp

3 potentiometers for basic settings

- Starting voltage: 30-80%U
- Acceleration ramp: 1-20s
- Deceleration ramp: 0-20s

2 relay outputs

OUT1: line contactor control (run)
OUT2: Top Of Ramp (TOR)

2

NFC VERSION: ADXNF

Smart and flexible

- NFC connectivity enables device configuration using a smart device with the LOVATO NFC App, available for Android and iOS.
- User-friendly: the app's user-friendly interface makes it easy to identify parameters via its menu structure.
- Accurate, repeatable settings.
- Password protection.
- Factory set to control scroll compressors, as used in air conditioning, chiller and heat pump applications.
- Flexible: all parameters can be modified via NFC to control any application: pumps, fans, conveyors, etc.
- Settings can be saved on the smart device and then copied to other ADXNF without losing time - ideal for programming series of devices.

NFC connectivity for configuration

- initial voltage step
- acceleration ramp
- deceleration ramp
- step down voltage and off deceleration step
- relay output function
- protection threshold
- password
- alarms

2 relay outputs

programmable (line contactor control, Top Of Ramp - TOR, global alarm, specific alarm)

3 VERSIONS

COMPARISON TABLE

Controlled phases
Integrated bypass
Configurable current limit
Electronic motor thermal protection
No power/phase loss control
Protection against phase inversion
Protection against locked rotor
Soft starter thermal protection (overtemperature)
Protection against low load
Max torque signalling
Configurable alarm properties
Digital start input
Digital relay outputs
Potentiometers for basic settings
NFC connectivity for programming
IR optical port for configuration and monitoring using optional USB (CX01) and Wi-Fi (CX02) devices
RS485 Modbus-RTU module (CX04) for remote control and supervision

ADVANCED FUNCTIONS

LOVATO NFC

The LOVATO NFC App is available for Android and iOS smart devices, and can be downloaded free of charge from Google Play Store and App Store.

THERMAL RELAY

NOT required on ADXNP version.

■ NFC CONNECTIVITY AND SETTINGS PROTECTION (ADXNF and ADXNP)

ADXNF (NFC) and ADXNP (advanced) soft starters are equipped with NFC (Near Field Communication) connectivity on the front panel, for configuring the soft starter with a smart device (smartphone or tablet) using the LOVATO NFC App.

- User friendly app interface, with parameters divided into groups by function for quick and easy research
- Accurate, repeatable settings, with digital configuration
- Settings can be saved on the smart device and then copied to other soft starters of the same model in a very fast way, ideal for programming series of devices
- The soft starter can be programmed without auxiliary power supply
- Settings can be locked with a password to protect against tampering by unauthorised parties.

■ ELECTRONIC MOTOR THERMAL PROTECTION (ADXNP)

The advanced version ADXNP integrates current transformers to measure the current in the phases powering the motor.

This information enables the soft starter to thermally protect the motor by stopping it when the current exceeds the nominal value for an extended period, depending on the thermal class setting, without the need to install an external thermal relay, thus saving money, space, cabling and installation time.

The electronic thermal protection offers the option of setting two different thermal classes: one for starting and one for operation. Available classes are 10, 15, 20 and 25, depending on how heavy duty the application is. The nominal motor current, thermal protection classes and the associated alarm properties can all be configured using the LOVATO NFC or LOVATO SAM1 Apps or Xpress software.

LOVATO NFC and SAM1 App downloads

FRONT IR OPTICAL PORT (ADXNP)

The advanced version ADXNP is equipped with a front infrared port for USB (CX01) or Wi-Fi (CX02) devices for connecting the soft starter to:

- a PC with Xpress software, via USB or Wi-Fi connection
- an Android or iOS smart device with the LOVATO SAM1 App, via Wi-Fi connection

This enables the user to program the device, run diagnostics and download data quickly and securely, directly on the front panel, and without the need to disconnect the enclosure's power. Using the Xpress software, connected via the CX01 USB device, the user can also monitor the motor's start and stop curves in real time (phase currents, voltages, torque, etc.), which makes commissioning the system far easier. The front IR optical port can also be used for connecting the optional CX04 RS485 communication port.

IoT 4.0 READY (ADXNP)

The advanced version ADXNP can be equipped with the optional CX04 RS485 port for integration into a supervision and monitoring network, or to communicate with intelligent devices, like a PLC or HMI.

- 3 wire RS485 serial port
- Modbus-RTU slave protocol
- 24 VAC/DC auxiliary power supply
- Quick and easy screw connection to the soft starter's front optical port.

RS485 COMMUNICATION MODULE

The CX04 module can be used to send motor start/stop commands, read measurements and program the soft starter's parameters using the Modbus protocol.

Compatible with the EXCGLA01 gateway data logger, supervision and energy management software **Synergy** and **Synergy Cloud**.

INSTALLATION

Screw or DIN rail mounting

ADXN soft starters can be fixed with screws or mounted on 35mm DIN rail (IEC/EN/BS 60715). Screw mounting is done via the 4 holes in the base of the housing, while for the DIN rail mounting there is a rubber insert to prevent the soft starter sliding along the DIN rail.

NUMBER OF STARTS/HOUR

ADXN soft starters offer optimal performance in controlling the majority of applications, and can handle a high number of starts/hour, which can be further increased by adding an optional fan (standard supply on the 38 and 45A models) to satisfy all application requirements. The data refer to the following test conditions: ambient temperature +40°C, starting current 4*In (In = nominal motor current) and 6 second ramp times.

Number of starts/hour WITHOUT FAN

In	5	10	15	20	25	30	35	40	45	50	55	60	65	70	75	80	85	90	95	100
3A	ADXN006

9A	ADXN012					ADXN018														
12A	ADXN012 - ADXN018																			
18A	ADXN018		ADXN025		ADXN030															
25A	ADXN025		ADXN030																	
30A	ADXN030																			
38A																				
45A																				

OPTIONAL FAN

ADXN soft starters up to 30A can be equipped with an optional fan (code EXP8007, already integrated into the 38 and 45A models) to improve their heat dissipation and increase the number of starts/hour.

Number of starts/hour WITH FAN

In	5	10	15	20	25	30	35	40	45	50	55	60	65	70	75	80	85	90	95	100

18A	ADXN018					ADXN025										ADXN030				
25A	ADXN025										ADXN030									
30A	ADXN030										ADXN038 ADXN045									
38A	ADXN038					ADXN045														
45A	ADXN045																			

Coordination with the line contactor

We recommend to install a line contactor upstream the ADXN soft starter, to break the circuit in the event of an anomaly (overload, short circuit, alarms, etc.) and protect the internal thyristors against undesired phenomena which may affect the power supply line when motor starting is not required (e.g. overvoltages or uncontrolled current peaks

generated by other devices installed on the same line).

The contactor is controlled by one of the ADXN soft starter's relay outputs, configured with dedicated function CONT.LIN (line contactor), which remains active, from the start command to completion of the deceleration ramp (if enabled).

The line contactor must be rated category AC-3 with a current value at least as high as the motor rated current. The following table shows the appropriate line contactors for ADXN soft starters.

Soft starter	I _e [A]	Line contactor
ADXN..006...	6	BF09 (9A AC-3)
ADXN..012...	12	BF12 (12A AC-3)
ADXN..018...	18	BF18 (18A AC-3)
ADXN..025...	25	BF25 (25A AC-3)
ADXN..030...	30	BF32 (32A AC-3)
ADXN..038...	38	BF38 (38A AC-3)
ADXN..045...	45	BF50 (50A AC-3)

INSTALLATION

Coordination with a motor protection circuit breaker

A motor protection circuit breaker can be installed upstream the ADXN soft starter to protect it against short circuit and overload (for ADXNB and ADXNF versions, which don't integrate motor thermal protection).

The optional rigid connection SMIX3150R is available to simplify cabling, allowing the mounting of the ADXN soft starter (up to 38A) directly to a motor protection circuit breaker type SM1R (rotary control), thus making the starter package more compact and reducing the time required for installation.

The following table lists compatible combinations of soft starters and motor protection circuit breakers.

Note: For the correct selection of the motor protection circuit breaker, check the motor's nameplate current, which must be included in the thermal trip adjustment range of the motor protection circuit breaker.

Soft Starter	Motor protection circuit breaker (MPCB)	MPCB thermal trip adjustment range [A]
ADXN..006...	SM1R0650	4...6.5
ADXN..012...	SM1R1400	9...14
ADXN..018...	SM1R1800	13...18
ADXN..025...	SM1R2500	20...25
ADXN..030...	SM1R3200	24...32
ADXN..038...	SM1R4000	30...40
ADXN..045...	SM2R5000 (*)	34...50

(*) not compatible with the SMIX3150R rigid connector.

Motor overload protection with a thermal relay (ADXNB and ADXNF)

ADXNB and ADXNF soft starters don't integrate the motor thermal protection, and must therefore be protected with an external device. As an alternative to a motor protection circuit breaker, the motor can be protected against overload with a thermal relay.

The thermal relay is typically installed downstream the line contactor. In case of use of LOVATO Electric RF38 series thermal relay, it can be mounted directly to BF series line contactor without the need of accessory equipment.

The following table lists compatible combinations of soft starters and RF38 thermal relays.

Note: The selection of the correct thermal relay must be done according to the motor's nameplate rated current (I_n), which may be lower than the soft starter's rated current (I_e). Make sure the motor's rated current is included in the thermal relay's adjustment range.

Soft Starter	I_e [A]	Thermal relay	Adjustment range [A]
ADXN..006...	6	RF380650	4...6.5
ADXN..012...	12	RF381400	9...14
ADXN..018...	18	RF381800	13...18
ADXN..025...	25	RF382500	20...25
ADXN..030...	30	RF383200	24...32
ADXN..038...	38	RF383800	32...38
ADXN..045...	45	RF825000	35...50
