## Description:

- This range of lugs features contained palm width.

- Our lugs have been specifically developed for application on L.V. circuit breakers with reduced space terminal blocks. In fact the contained palm width allows an immediate and easier installation.
- Are manufactured from electrolytic copper tube Cu-OF CW008A conform to UNI EN 13600:2003.
- Lugs are electrolytically tin plated with a minimum thickness of $3 \mu \mathrm{~m}$ to avoid oxidation.
- Cembre lugs are annealed to guarantee optimum ductility which is an absolute necessity for connectors which will have to withstand the severe deformation arising when compressed and any bending of the palm during installation.
- The specifically designed section of the barrel and the choice of principal dimensions are optimising the best combination of mechanical strength and electrical conductivity.
- The barrel is provided with an internal taper to ease the introduction of the conductor; furthermore, its length grants a comfortable and correct positioning between dies, during crimping operations.

## Each connector is marked as follows:

- Cembre trade mark and reference number.
- Nature and size of conductor $\left(\mathrm{mm}^{2}\right)$.
- $\varnothing$ stud (mm).

## Markings:

## Cembre SpA
